

Discovering Context-Aware Models for Predicting Business Process Performances

Bianka Bakullari

Motivation

- Run-time support is an emerging topic in Process Mining research
- Business processes are very complex and flexible
- Case properties and environmental factors influence what is aimed to be predicted
- Discover context-related execution scenarios and model them via distinct state-aware transition systems.
- Case Study: Time Prediction on a Logistics Process

Structure

- Idea
- Transition Systems for event logs
- State abstraction functions
- Clustering function through a Predictive Clustering Tree
- Small running example
- Further possibilities

Discovering Context-Aware **Models** for Predicting Business Process Performances

Event log $L = \{ \langle a, b, c, d \rangle, \langle a, c, b, d \rangle \}$

<u>12345</u>	Payment	12.01.2016	Sarah

The table displays business process instances with various features. A red arrow labeled 'context' points to the last six columns: Amount, Type, Income, Risk evaluation, Workload, and Time period, which are also circled in red.

Discovering **Context-Aware** Models for Predicting Business Process Performances

Case dependent features

External features

Approach - Idea

- Use context features to partition traces into clusters.
- Build A-FSM for each cluster.

Type = Standard AND Income = High

Risk = High AND Workload = High

Risk = Low AND Time period = July

Approach - Idea

- Use context features to partition traces into clusters.
- Build A-FSM for each cluster.

New running case: $\langle a, c, \dots \rangle$

Find corresponding cluster.

Type = Standard AND Income = High

Risk = High AND Workload = High

Risk = Low AND Time period = July

Approach - Idea

- Use context features to partition traces into clusters.
- Build A-FSM for each cluster.

New running case: $\langle a, c, \dots \rangle$

Find corresponding cluster.

Approach - Idea

- Use context features to partition traces into clusters.
- Build A-FSM for each cluster.

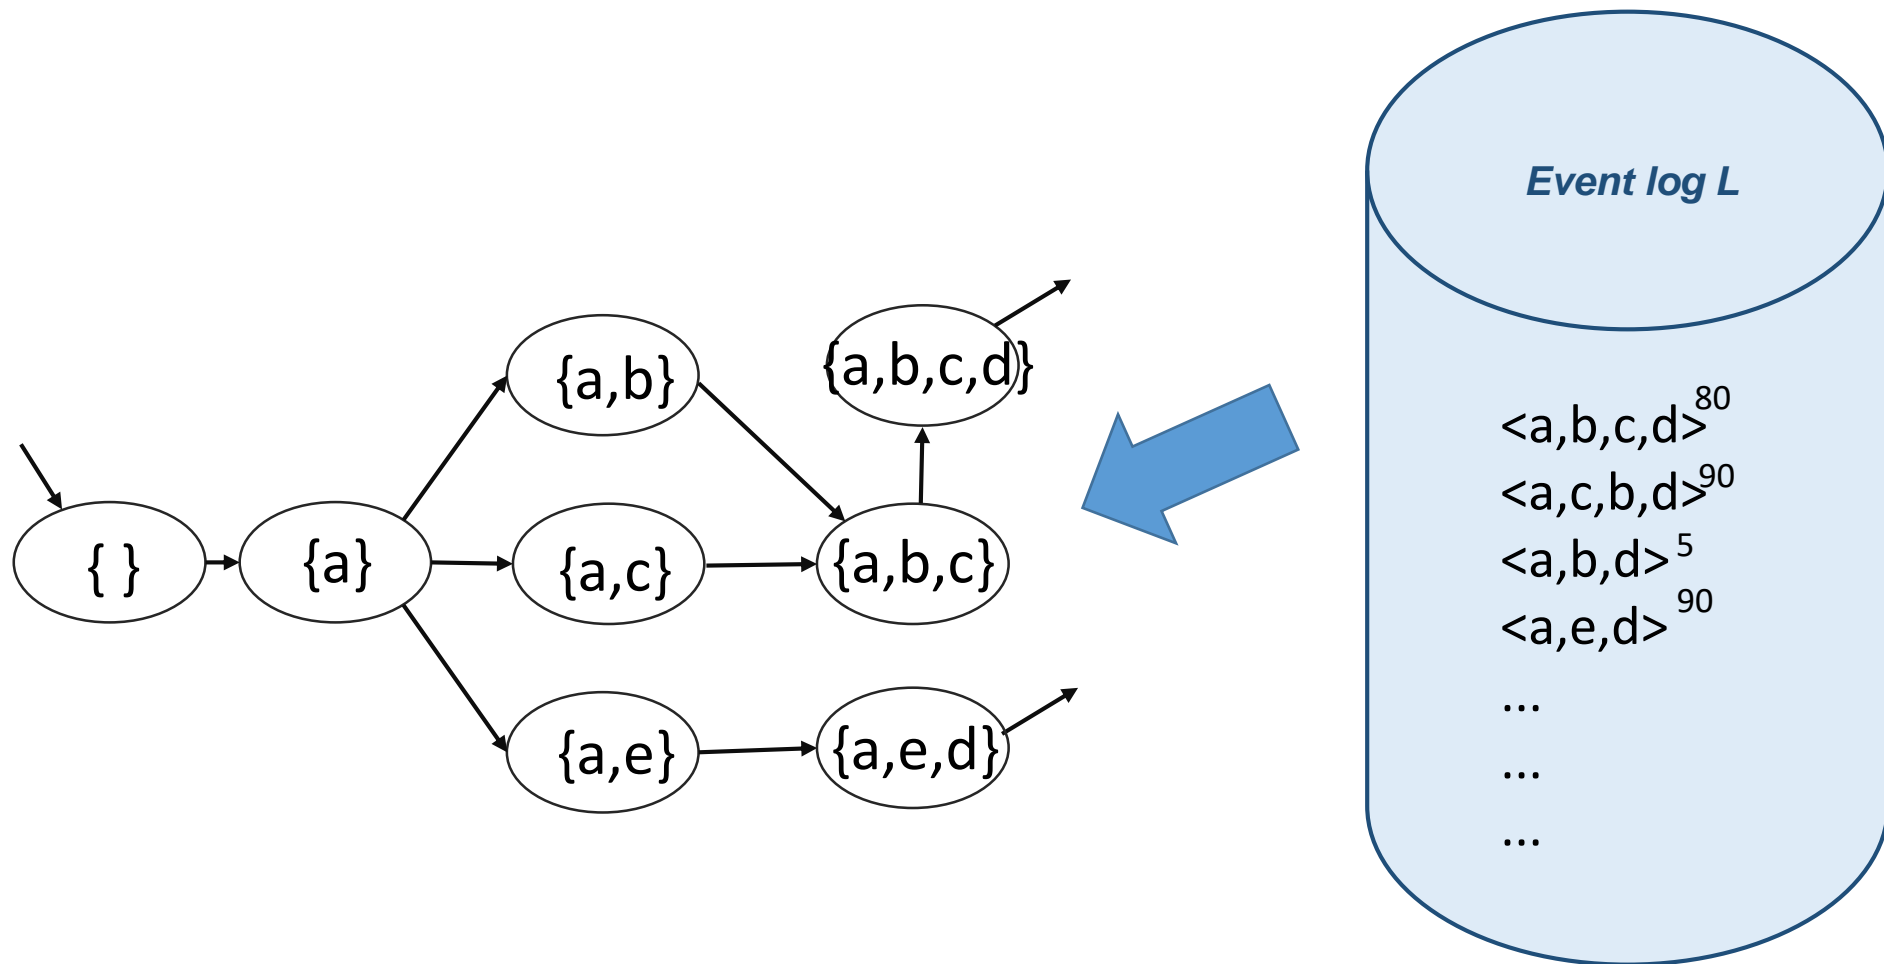

New running case: <a,c,...>

Find corresponding cluster.

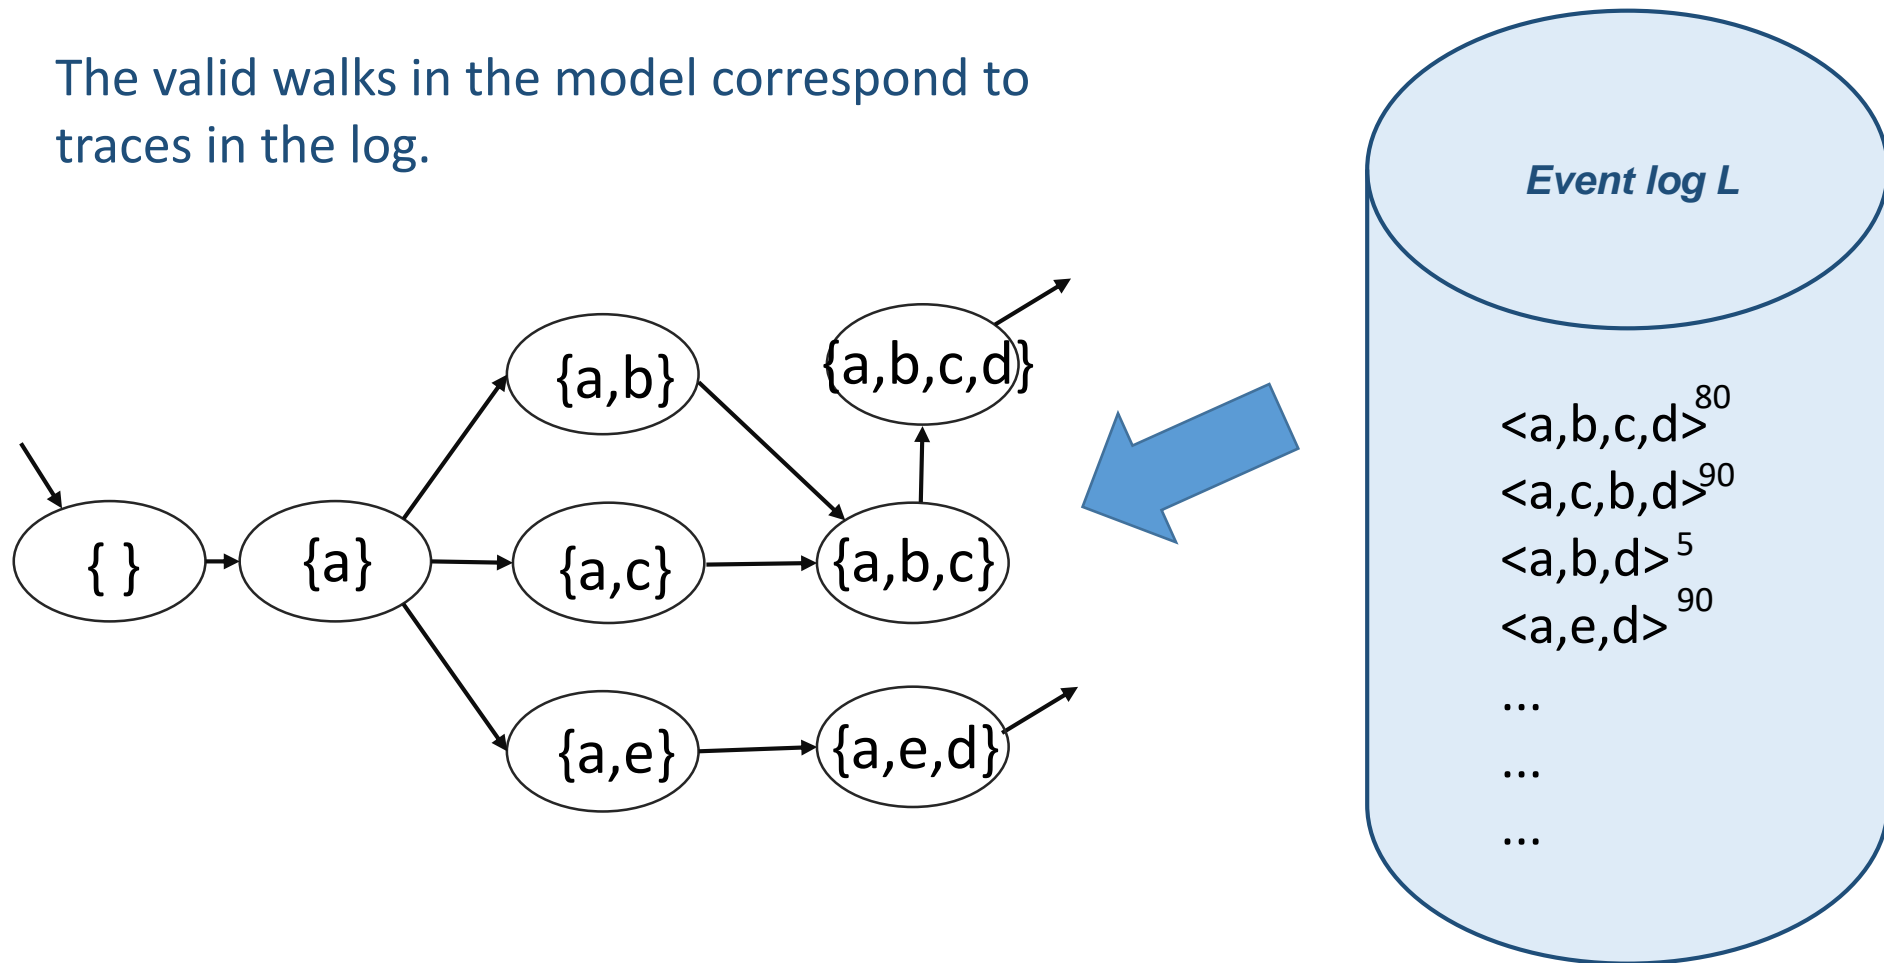

Predicted cost for this case: 2000€

Transition Systems (for event logs)

Transition Systems (for event logs)

The valid walks in the model correspond to traces in the log.

Transition Systems (for event logs)

The valid walks in the model correspond to traces in the log.

Each state represents some partial trace in the log.

Partial traces are prefixes of full (complete) traces.

$\langle a,b,c,d \rangle^{80}$
 $\langle a,c,b,d \rangle^{90}$
 $\langle a,b,d \rangle^5$
 $\langle a,e,d \rangle^{90}$
...
...
...

Transition Systems (for event logs)

The valid walks in the model correspond to traces in the log.

Each state represents some partial trace in the log.

Partial traces are prefixes of full (complete) traces.

A function mapping partial traces to state representations is called an abstraction (short: abs).

<a,e,d>

...

...

...

State representation function

Which state representations/which abs function?

- Sets
- Multisets
- Sequences
- Last k events
- ... ?

State representation function

Which state representations/which abs function?

- Sets
- Multisets
- Sequences
- Last k events
- ... ?

It depends on how we want to distinguish the traces regarding the prediction.

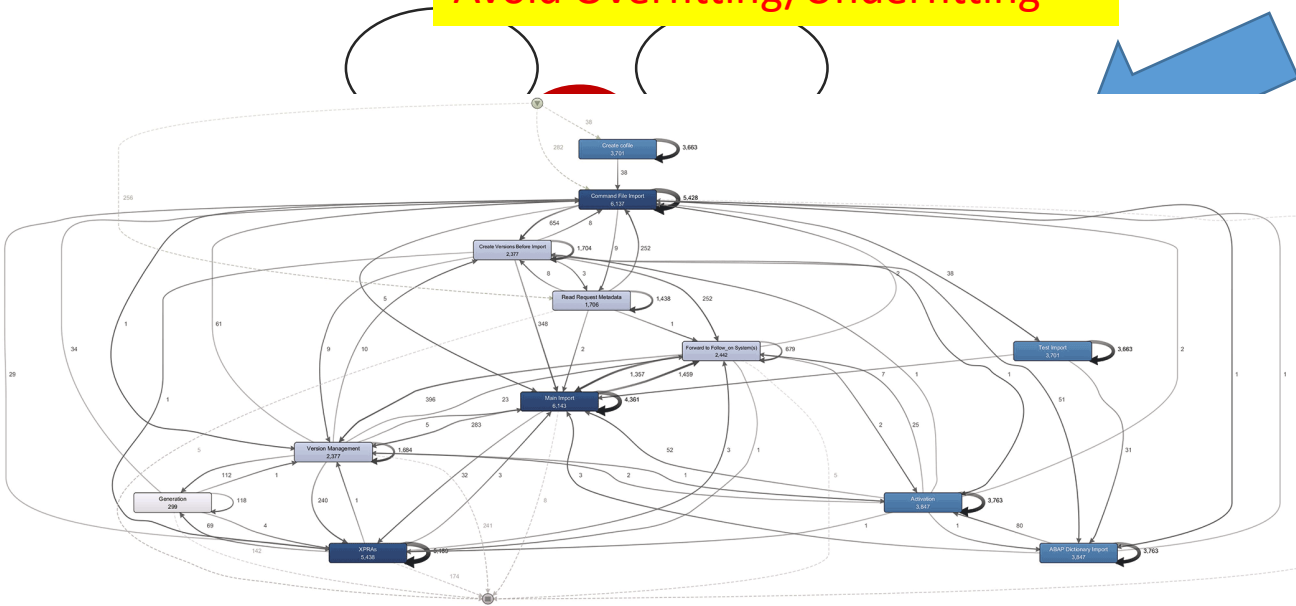

State representation function

Which state representations/which abs function?

- Sets
- Multisets
- Sequences
- Last k events
- ... ?

It depends on how we want to distinguish the traces regarding the prediction.

Avoid Overfitting/Underfitting

State representation function

abs: state representation functions

$P(L)$: set of all prefix traces in log L .

abs: $P(L) \rightarrow \mathcal{R}$

State representation function

abs: state representation functions

$P(L)$: set of all prefix traces in log L .

abs: $P(L) \rightarrow \mathcal{R}$

Set: order and number of occurrences of activities not important.

Bag (multiset): order of occurring activities not important.

List (sequence): both order and number of occurrences of activities taken into consideration.

Maximal horizon: only last k activities relevant.

Filtering: ignore certain activities.

State representation function

abs: state representation functions

$P(L)$: set of all prefix traces in log L .

abs: $P(L) \rightarrow \mathcal{R}$

Set: order and number of occurrences of activities not important.

Bag (multiset): order of occurring activities not important.

List (sequence): both order and number of occurrences of activities taken into consideration.

Maximal horizon: only last k activities relevant.

Filtering: ignore certain activities.

Only building blocks for
more complex functions

State representation function

abs: state representation functions

$P(L)$: set of all prefix traces in log L .

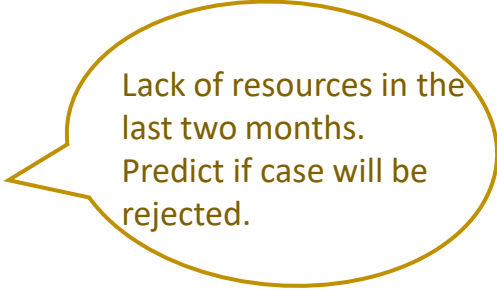

abs: $P(L) \rightarrow \mathcal{R}$

Consider:

The number of occurrences of „Waiting“ in the last two months.

Filter partial trace based on timestamp, then compute the set abstraction.

A yellow speech bubble containing text.

Lack of resources in the last two months.
Predict if case will be rejected.

State representation function

abs: state representation functions

$P(L)$: set of all prefix traces in log L .

abs: $P(L) \rightarrow \mathcal{R}$

Consider:

The number of occurrences of „Waiting“ in the last two months.

Filter partial trace based on timestamp, then compute the set abstraction.

The activities handled by „Mike“ out of the last 4 activities.

Set maximal horizon to 4, filter the partial trace based on its resource value, then use the multiset abstraction.

We want to predict duration of cases depending on the category of activities taken up by Mike.

Transition Systems with Predictions

Case ID	Trace
1	<Application (00), Meeting (15), Waiting (20), Acceptation (62)>
2	<Application (15), Meeting (40), Waiting (45), Waiting (80), Rejection (95)>
3	<Meeting (48), Application (50), Waiting (60), Acceptation (85)>
4	<Meeting (80), Application (85), Waiting (90), Waiting (120), Rejection (130)>

activity timestamp

A blue arrow points from the word "activity" to the "Meeting (80)" event in the trace of Case ID 4. A red arrow points from the word "timestamp" to the "(80)" timestamp in the same event.

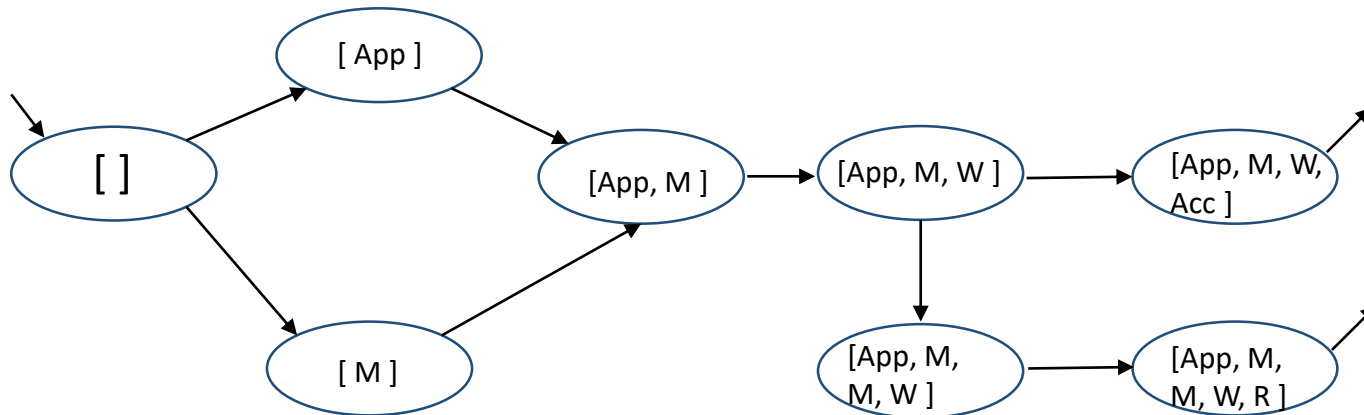

Transition Systems with Predictions

Predictive Clustering Trees (PCT)

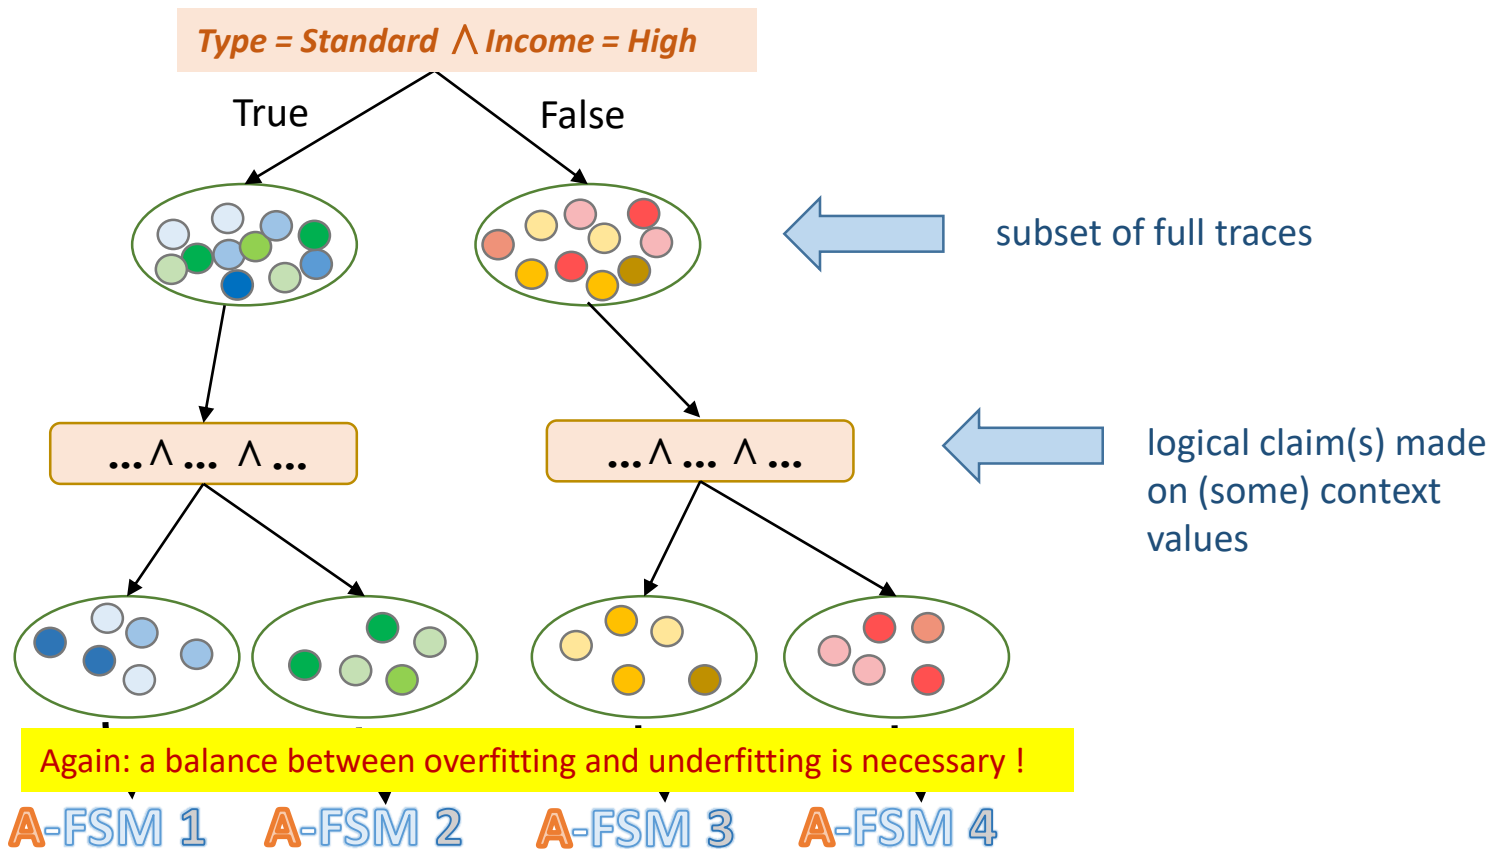

Predictive Clustering Trees (PCT)

Recall:

The predictions in the states should be similar!

Similar traces:

- the set of states their prefixes are mapped to share many common elements
- the prediction values they assign to these states are similar

Vector representation for clustering

Similar traces:

- the set of states their prefixes are mapped to share many common elements
- the prediction values they assign to these states are similar

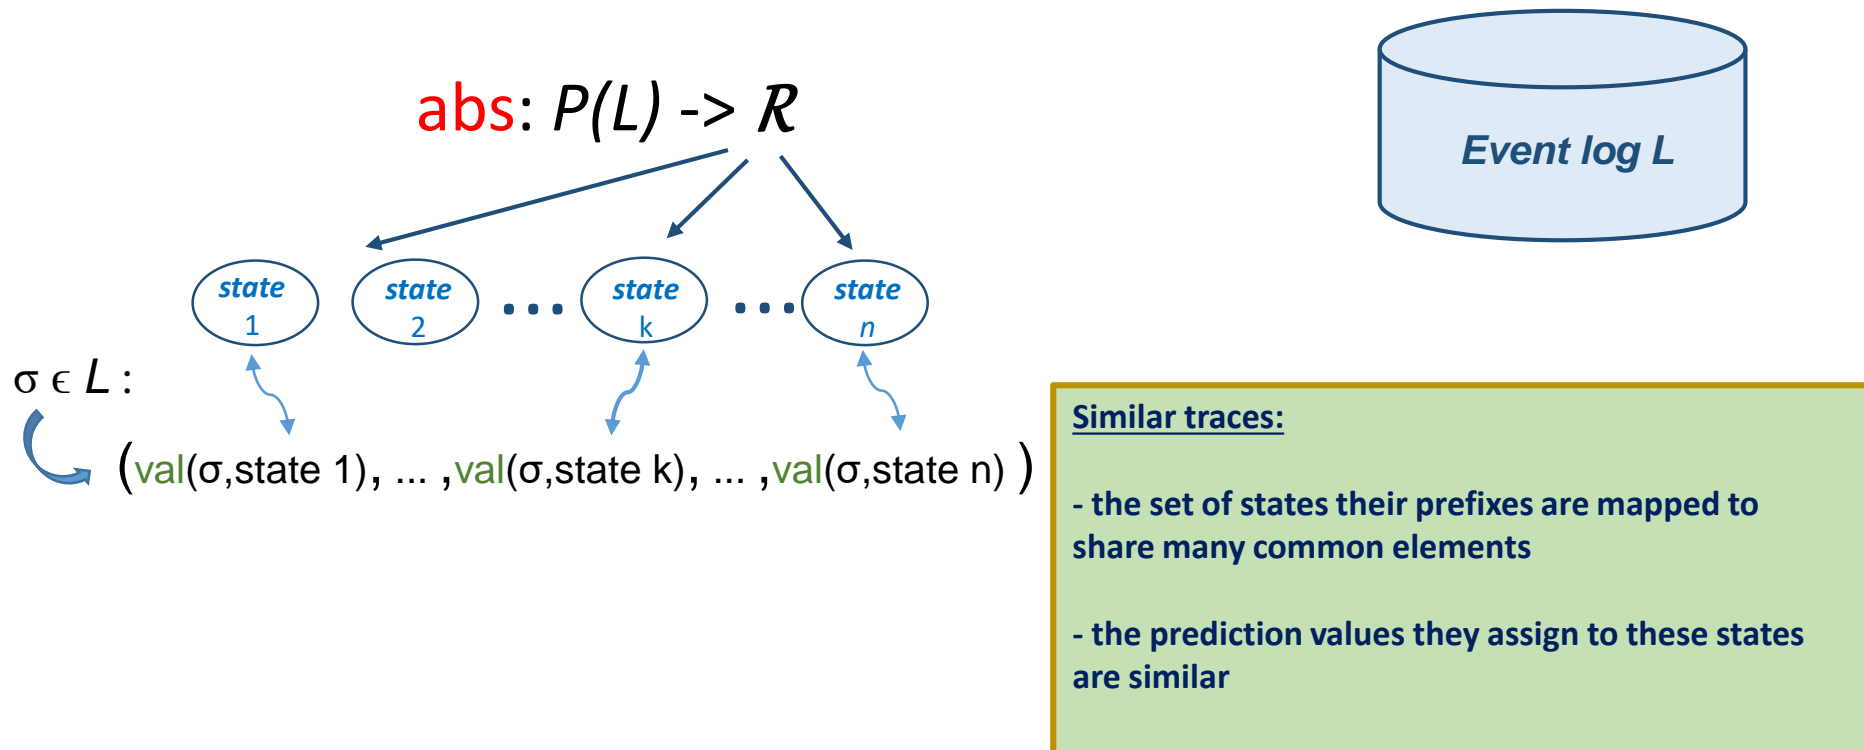

Vector representation for clustering

7	[I, M, R, M, S]	high	SE	John	0.70
8	[I, M, F, M, M, S]	average	DS	John	0.60
9	[I, M, F, R, S]	high	SE	Brown	0.80

Example

the process of preparation and supervision of an academic research paper

Clustering function given by the PCT:

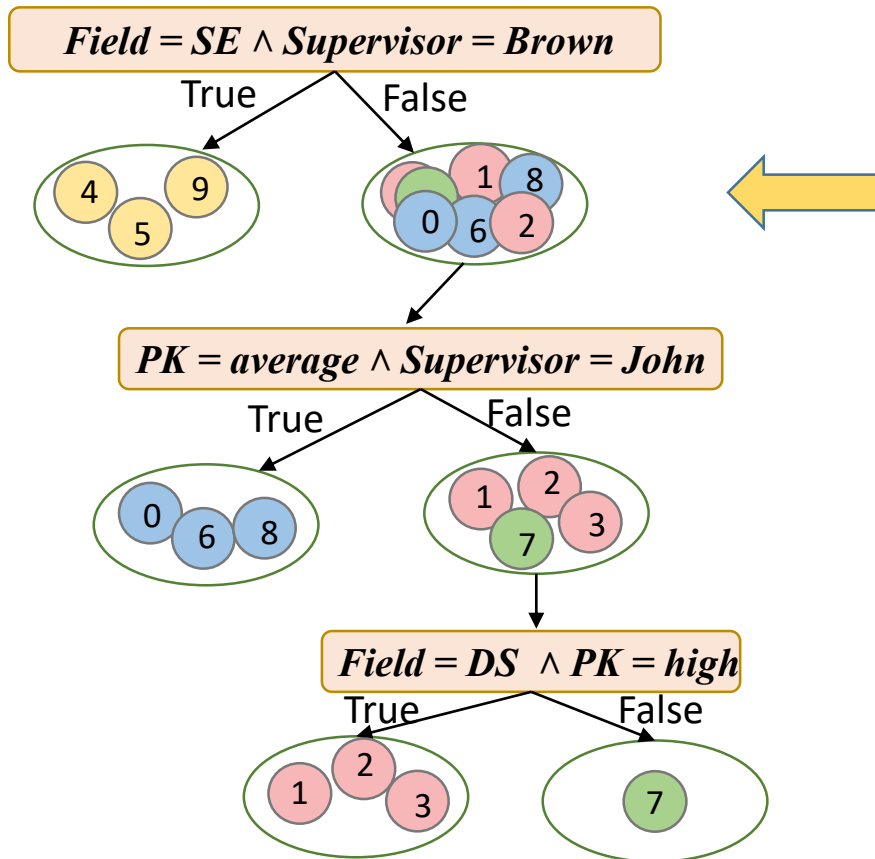

CaseID	Trace	PK	Field	Supervisor	Final Grade
0	[I, M, M, F, M, S]	average	SE	John	0.70
1	[I, M, M, F, R, S]	high	DS	John	0.85
2	[I, M, M, F, R, S]	high	DS	John	0.95
3	[I, M, M, R, F, S]	high	DS	Brown	0.90
4	[I, M, R, F, S]	average	SE	Brown	0.80
5	[I, M, R, F, S]	high	SE	Brown	0.75
6	[I, M, M, F, M, S]	average	DS	John	0.70
7	[I, M, R, M, S]	high	SE	John	0.70
8	[I, M, F, M, M, S]	average	DS	John	0.60
9	[I, M, F, R, S]	high	SE	Brown	0.80

Example

the process of preparation and supervision of an academic research paper

Clustering function given by the PCT:

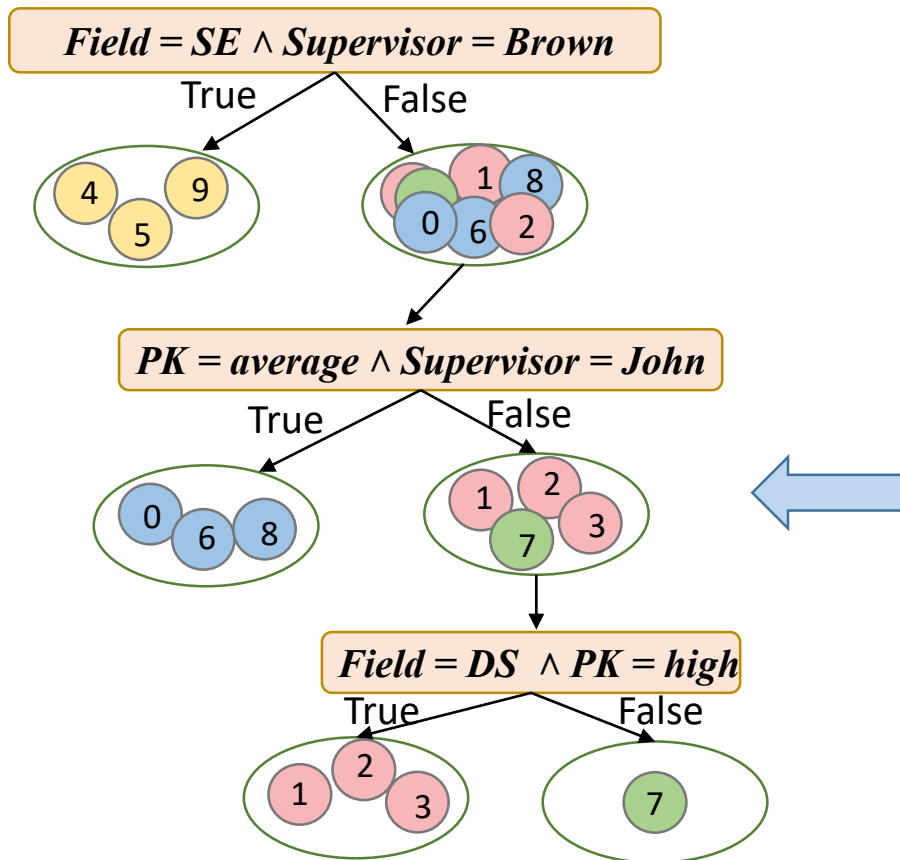

CaseID	Trace	PK	Field	Supervisor	Final Grade
0	[I, M, M, F, M, S]	average	SE	John	0.70
1	[I, M, M, F, R, S]	high	DS	John	0.85
2	[I, M, M, F, R, S]	high	DS	John	0.95
3	[I, M, M, R, F, S]	high	DS	Brown	0.90
4	[I, M, R, F, S]	average	SE	Brown	0.80
5	[I, M, R, F, S]	high	SE	Brown	0.75
6	[I, M, M, F, M, S]	average	DS	John	0.70
7	[I, M, R, M, S]	high	SE	John	0.70
8	[I, M, F, M, M, S]	average	DS	John	0.60
9	[I, M, F, R, S]	high	SE	Brown	0.80

Approach - Overview

Example

the process of preparation and supervision of an academic research paper

CaseID	Trace	PK	Field	Supervisor	Final Grade
4	[I, M, R, F, S]	average	SE	Brown	0.80
5	[I, M, R, F, S]	high	SE	Brown	0.75
9	[I, M, F, R, S]	high	SE	Brown	0.80

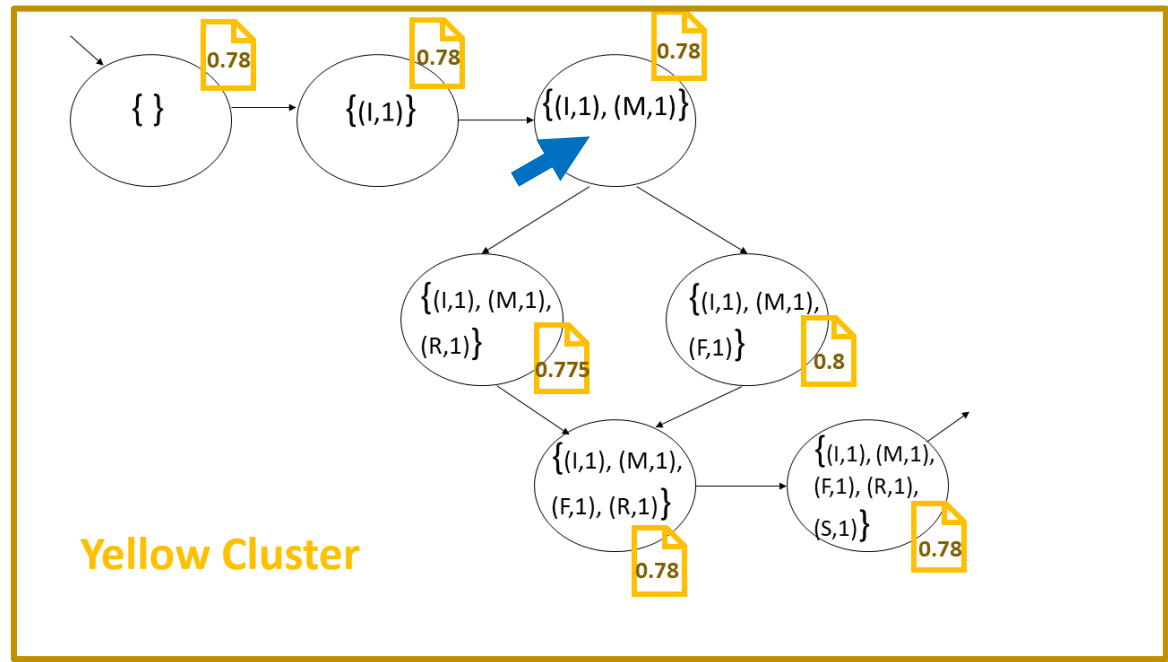

Example

the process of preparation and supervision of an academic research paper

CaseID	Trace	PK	Field	Supervisor	Final Grade
4	[I, M, R, F, S]	average	SE	Brown	0.80
5	[I, M, R, F, S]	high	SE	Brown	0.75
9	[I, M, F, R, S]	high	SE	Brown	0.80

New case with this Field
and this Supervisor:

<I, M,...>

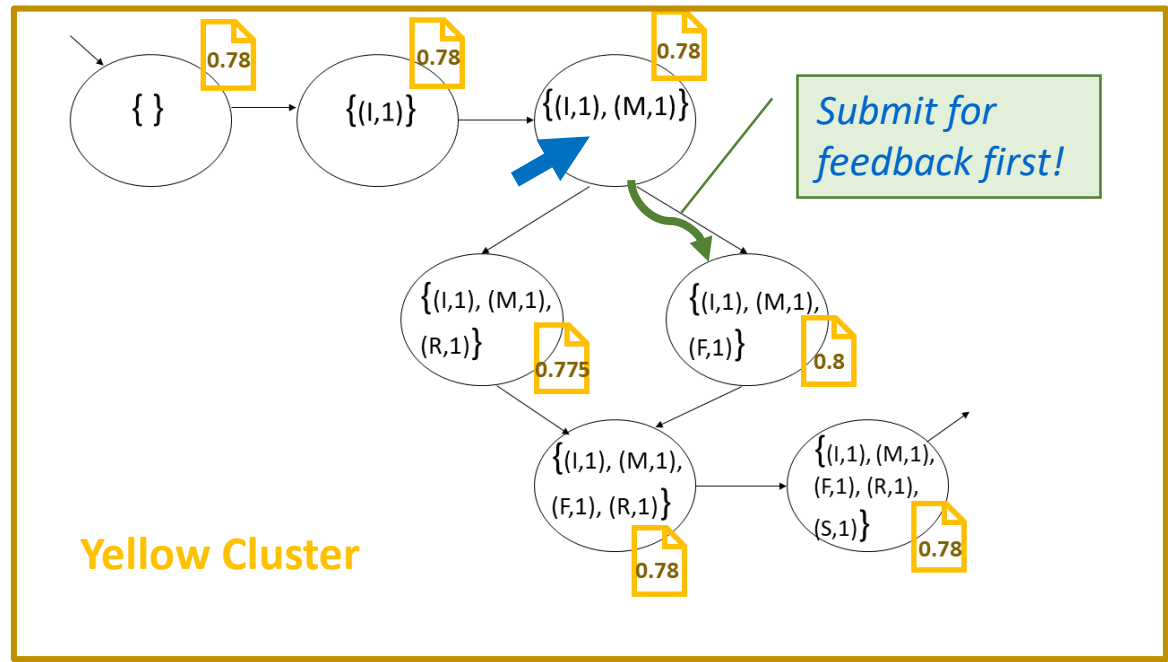

Example

the process of preparation and supervision of an academic research paper

CaseID	Trace	PK	Field	Supervisor	Final Grade
4	[I, M, R, F, S]	average	SE	Brown	0.80
5	[I, M, R, F, S]	high	SE	Brown	0.75
9	[I, M, F, R, S]	high	SE	Brown	0.80

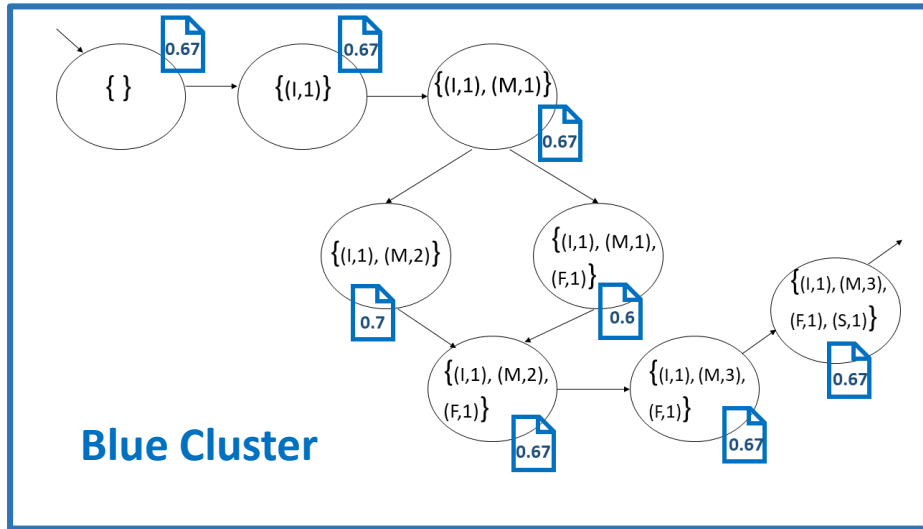

New case with this Field
and this Supervisor:

<I, M,...>

Example

the process of preparation and supervision of an academic research paper

Example

the process of preparation and supervision of an academic research paper

Example

the process of preparation and supervision of an academic research paper

Example (predicting both RT and final grade)

the process of preparation and supervision of an academic research paper

Case dependent

External

CaseID	Trace	PK	Field	Supervisor	Final Grade
0	[I, M, M, F, M, S]	average	SE	John	0.70
1	[I, M, M, F, R, S]	high	DS	John	0.85
2	[I, M, M, F, R, S]	high	DS	John	0.95
3	[I, M, M, R, F, S]	high	DS	Brown	0.90
4	[I, M, R, F, S]	average	SE	Brown	0.80
5	[I, M, R, F, S]	high	SE	Brown	0.75
6	[I, M, M, F, M, S]	average	DS	John	0.70
7	[I, M, R, M, S]	high	SE	John	0.70
8	[I, M, F, M, M, S]	average	DS	John	0.60
9	[I, M, F, R, S]	high	SE	Brown	0.80

I : Introductory meeting
M: Meeting with the supervisor
F: Feedback
R: Presentation rehearsal
S: Submission

PK : Prior Knowledge

Predict remaining time, final grade

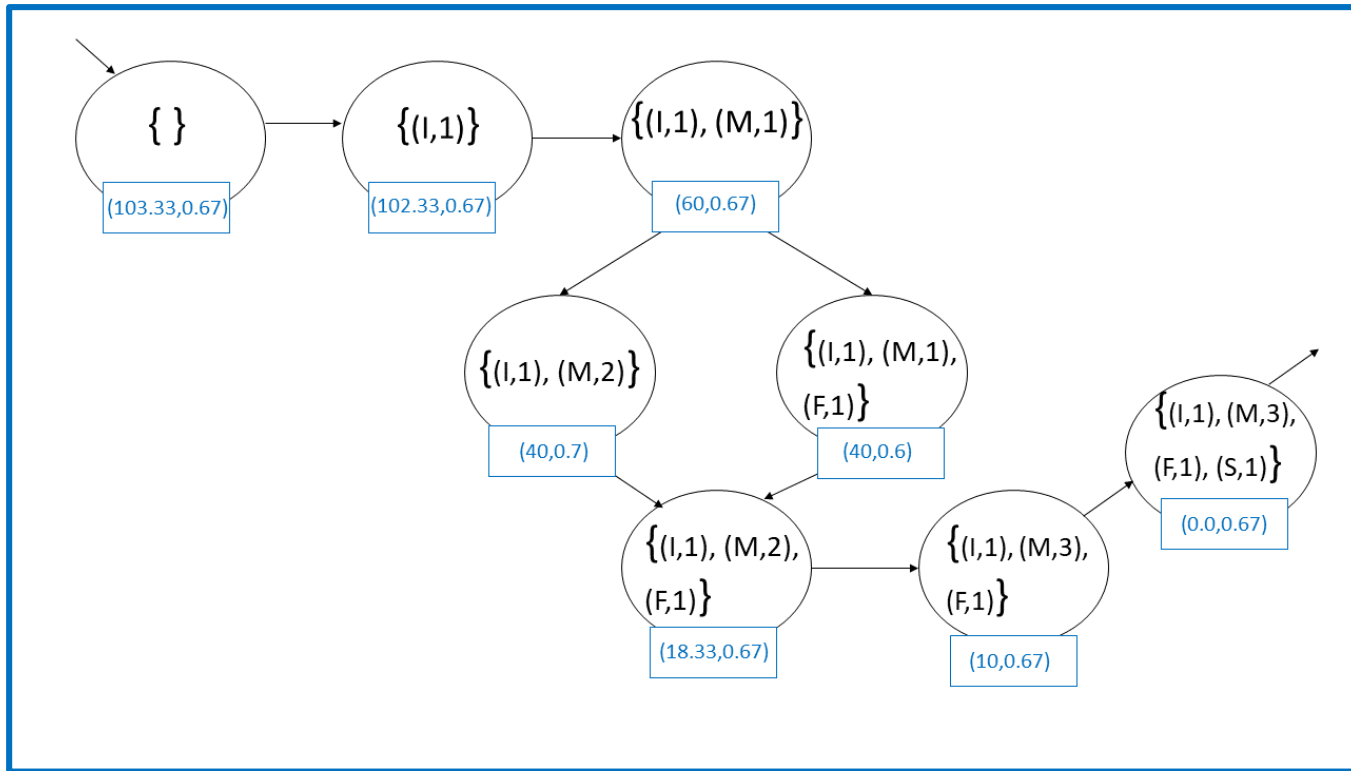

abs: multiset

Example (predicting both RT and final grade)

the process of preparation and supervision of an academic research paper

A-FSM for the Blue cluster :

CaseID	Trace	PK	Field	Supervisor	Final Grade
0	[I, M, M, F, M, S]	average	SE	John	0.70
6	[I, M, M, F, M, S]	average	DS	John	0.70
8	[I, M, F, M, M, S]	average	DS	John	0.60

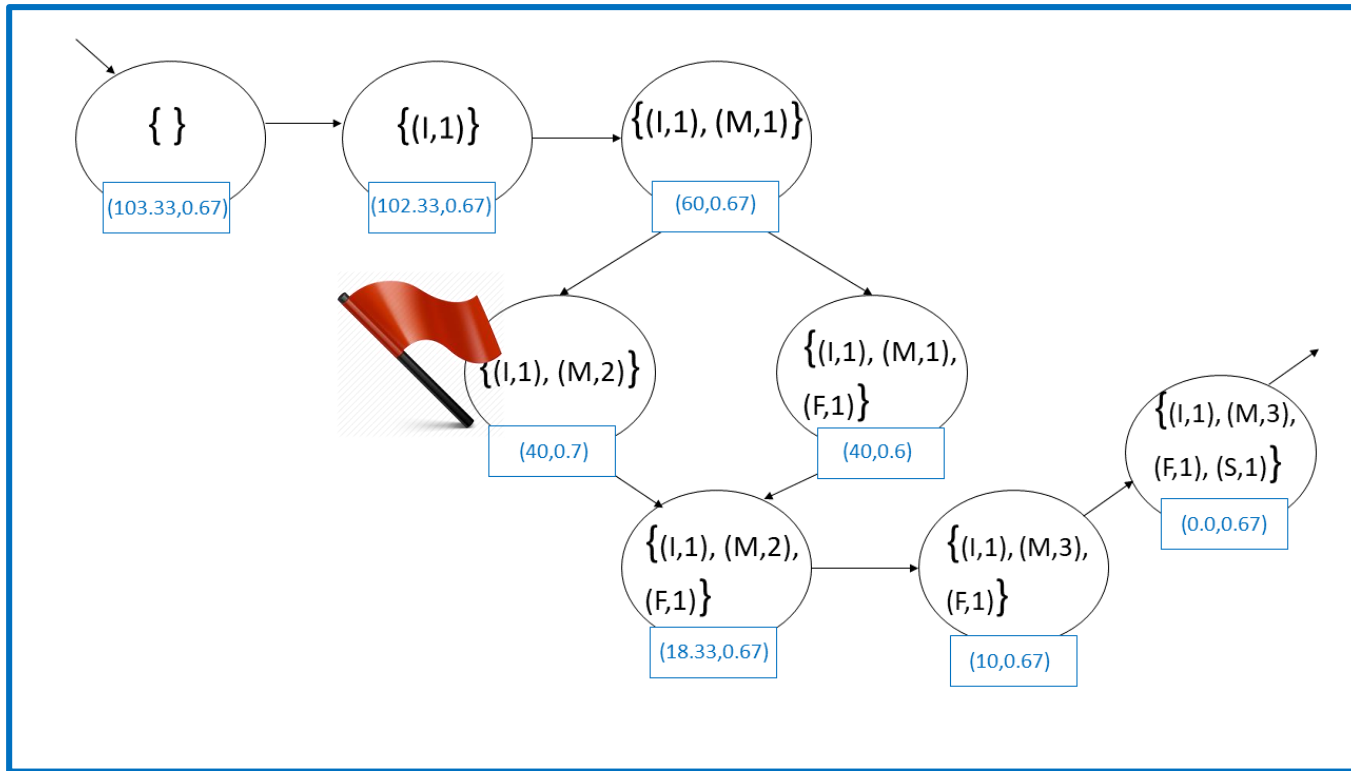

Example (predicting both RT and final grade)

the process of preparation and supervision of an academic research paper

A-FSM for the Blue cluster :

CaseID	Trace	PK	Field	Supervisor	Final Grade
0	[I, M, M, F, M, S]	average	SE	John	0.70
6	[I, M, M, F, M, S]	average	DS	John	0.70
8	[I, M, F, M, M, S]	average	DS	John	0.60

Further possibilities

Until now:

- always used the activity labels for representing traces.
- always picked a simple abstraction function
- always used the average measure to estimate the annotations

Further possibilities

Until now:

- always used the activity labels for representing traces.
- always picked a simple abstraction function
- always used the average measure to estimate the annotations

Additionally:

Complement the annotations of the states with comments, warnings or suggestions about future actions

Questions?

Thank you for your attention.
